Database: To be provided on exam day

Practical Exam

You will be creating part of an employee information portal. The application should contain the below features:

1. Login screen
2. User Registration
3. Role Management
4. Reports

You can either create a windows application or web application, however you are required to use C# and Microsoft SQL Server. Basic validations and general design guidelines for coding should be practiced and scoring will take these into account for all screens.

This application should have the following functions:

Task 1 – Login

This task will involve:

1. Creating a login screen
2. Creating the required tables in the specified formats
3. Creating the business logics for the screen

Task 2 – Main Screen & Role Management

This task will involve:

1. Main Screen setup
2. Creation of roles table and the related authorization table
3. Creation of the business logics for the screen (add and edit)

Task 3 – Register User

This screen will create new user registrations in the system (add only).

Task 4 – Report

1. This screen will show the report based on selection criteria.
2. Preference is given to an actual report (not a grid)

Task 5 – Test Cases

Preparation of test case document for the above tasks.

Theory Questions:

1. A configuration question related to MS SQL.
2. A configuration question related to IIS web hosting.
